

TESMEC GROUP WINS A FRAMEWORK CONTRACT IN FRANCE WORTH MORE THAN 40 MILLION EURO FROM ENEDIS FOR THE SUPPLY OF NEXT-GENERATION EQUIPMENT FOR THE REMOTE CONTROL AND AUTOMATION OF THE ELECTRICITY DISTRIBUTION NETWORK, WITHIN COMPLIANCE WITH THE CUSTOMER'S TECHNICAL QUALIFICATION CONDITIONS

- **The lot was awarded to the subsidiary Tesmec Automation by Enedis, a company of the EDF group (*Electricité de France*), French electricity distribution system operator;**
- **The supplied modular electrical equipment constitutes an innovative solution supporting the energy transition and the digitalization of the electrical infrastructure, ensuring safe management through cybersecurity protocols;**
- **The contract strengthens Tesmec's position in the business of technologies for electrical infrastructure and in the French market, representing a fundamental step in the internationalization strategy of the Energy Automation division;**

Grassobbio (Bergamo), 7 February 2025 – Tesmec S.p.A. (EURONEXT STAR MILAN: TES)) (“**Tesmec**” or the “**Company**”), a leading company in the market for infrastructure technologies (overhead, underground and rail networks) for the transport of electricity, data and materials (oil and derivatives, gas and water), as well as technologies for quarrying and surface mining, announces the award, through its subsidiary Tesmec Automation S.r.l., of a lot of the tender issued by Enedis, a company of the EDF Group (*Electricité de France*), the French electricity distribution system operator, for the supply of next-generation equipment for the remote control and automation of the electricity network, for a total value of more than 40 million euros and a duration of 8 years (of which 3 are optional). After an initial project development phase, within compliance with Enedis’ technical qualification conditions met by Tesmec, it is planned a massive and constant deployment throughout the French national territory, paced over the contract period.

The supply includes the EMIS device (*Equipement Modulaire d’Instrumentation et de Supervision*), an innovative and intelligent solution supporting the energy transition and the digitalization of the electrical infrastructure, ensuring safe management through cybersecurity protocols. Once installed in medium and low voltage (MV/LV) transformer substations, or at the nodes of the electricity distribution network, EMIS can regulate energy flows in real-time with extreme flexibility, ensuring data exchange through encrypted communication protocols to protect the network from any malicious intrusion. In general, the EMIS solution can perform multiple functions: secure communication with the control center through encrypted protocols, activation of maneuvering organs, precise measurement of voltages and currents, and timely detection of any faults on the network, even in the face of extreme weather phenomena.

The new contract is strategic for the Group, as it further consolidates Tesmec's position in the competitive sector of technologies for electrical infrastructure and in the French market, representing a fundamental step in the internationalization strategy of the Energy Automation sector and an additional piece in the Group's international expansion, confirming its ability to seize opportunities offered by foreign markets.

Carlo Caccia Dominioni, BU Energy Director, commented: *"We are proud to contribute to the future development of the French electricity network, leveraging the expertise gained in digital technologies for the electrical sector. The EMIS project allows us to support Enedis, one of the main European utilities, in ensuring a capillary integration of renewable energies, full support for electric mobility, and maximum network resilience in the face of extreme weather events. At the same time, this result represents a strategic success for Tesmec Automation: after consolidating our position as a reliable partner for the main Italian players, we are working effectively to exploit the opportunities and potential offered by international markets".*

Tesmec Group

Tesmec Group is active in the design, production and marketing of systems and integrated solutions for the construction, maintenance and diagnostics of infrastructures (overhead, underground and railway networks) for the transport of energy, data and materials (oil and derivatives, gas and water), as well as technologies for quarries and surface mining. The Group operates in the following sectors: - Energy. Tesmec Group designs, manufactures and markets machines and integrated systems for the construction and maintenance of overhead and underground power lines, fibre optic networks (Stringing segment), as well as advanced equipment and systems for the automation, efficiency, management and monitoring of high, medium and low voltage electrical networks and substations (Energy Automation Segment); - Trencher. Tesmec Group carries out the design, production, sale and rental of trencher machines functional to four types of activities (excavation and mines, excavations for the installation of pipelines, for the construction of telecommunication and optical fibre infrastructures, excavations for the construction of underground power networks), as well as the provision of specialized excavation services. The trencher machines are rented by the Group both with the operator (hot rental or wet rental) and without the operator (cold rental or dry rental); - Railway. The Group designs, manufactures and markets machines and integrated systems for the installation and maintenance of the railway catenary, devices for the diagnostics of the railway catenary and track, as well as customized machines for special operations on the line.

Born in Italy in 1951 and led by the Chairman and CEO Ambrogio Caccia Dominioni, the Group counts on more than 1000 employees and has its production sites in Grassobbio (Bergamo), Sirone (Lecco), Monopoli (Bari) and Bitetto (Bari) in Italy, Alvarado (Texas) in the USA and Durtal in France. It relies on three research and development units in Fidenza (Parma), Padua and Patrica (Frosinone). Listed on the EURONEXT STAR MILAN of the Euronext Milan market of the Italian Stock Exchange, the Group boasts a global commercial presence through foreign subsidiaries and sales offices in the USA, in South Africa, West Africa, Australia, New Zealand, Russia, Qatar and China.

In its development strategy, the Group intends to consolidate its position as a solution provider in the three abovementioned business areas, by exploiting the trends of energy transition, digitalization, and sustainability.
